Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

Notice of Pre-AIA or AIA Status

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

This action is in response to the claimed filed 05/22/2024.

Claims 1-5, 7-10, 12, 14-16, and 18-22 are allowed.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Kandal, US Patent No. 8423275B1 and Eyal Amir, US 20120161986 A1.

Kandal discloses a method for generating parking related data in respect of one or more navigable elements of a navigable network within a geographic area, each navigable element being represented by a segment of an electronic map, the electronic map comprising a plurality of segments representative of the navigable network, said method comprising:

obtaining positional data relating to a plurality of trips made by vehicles in the navigable network, each trip being a journey between stationary periods indicative of the vehicle being in a parked state (***See at least column 3, lines 7-12***);

analysing, for each one of the plurality of trips, the positional data to identify a parking space search portion of the trip, the analyzing including analysing the respective positional data to identify a start of a parking space search during the trip that defines the start of the parking space search portion of the trip (***See at least column 5, lines 15-18***);

analysing the positional data corresponding to the parking search portions of the trips to obtain, for each one of at least one set of a plurality of different time periods, a relative value of the parking related parameter associated with each one of a plurality of segments of the electronic map in respect of the time period, the parking related parameter being a time dependent parameter (***See at least column 5, lines 15-18***).

Amir teaches:

clustering, for the or each set of time periods, the segments into groups of segments based on the relative values of the parking related parameter obtained for the segments in each time period of the set, wherein, for each of the time periods of the set of time periods, the segments in each group of segments are considered to have similar relative values of the parking related parameter (***See at least ¶48 and 53***).

None of the prior art of record references taken together or in combination with the remaining prior art of record discloses:

(Claims 1, 16 and 18) "using, for each group, relative parking related parameter data associated with each of the segments of the group to generate an aggregate profile that represents a time dependence of the relative value of the parking related parameter for that group, wherein the aggregate profile is used as a representation of the time dependence of the parking related parameter for all of the segments of that group; generating a parking search route based on one or more of the aggregate profiles and displaying, on a display, a representation of the parking search route, the displaying including superposing the representation of the parking search route on an electronic map displayed on the display."

In combination with the remaining elements and features of the claimed invention. It is for those reasons that the applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be dearly labeled "Comments on Statement of Reasons for Allowance."
