EXAMINER	
PENA-SANTANA, TANIA M	

ART UNIT	PAPER NUMBER
2443	

NOTIFICATION DATE	DELIVERY MODE
09/03/2026	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

uspatents@gtclawgroup.com

Office Action Summary	Application No. 18/908,320	Applicant(s) Fang et al.	
	Examiner TANIA M PENA-SANTANA	Art Unit 2443	AIA (First Inventor to File) Status Yes

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☑ Responsive to communication(s) filed on 07/27/2026.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☑ This action is **FINAL.** 2b) ☐ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5) ☑ Claim(s) 1-6,8-14 and 16 is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6) ☐ Claim(s) _____ is/are allowed.

7) ☑ Claim(s) 1-6,8-14 and 16 is/are rejected.

8) ☐ Claim(s) _____ is/are objected to.

9) ☐ Claim(s) _____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to **PPHfeedback@uspto.gov.**

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☐ All b)☐ Some** c)☐ None of the:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☐ Notice of References Cited (PTO-892)

2) ☑ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date 07/27/2026.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date _____.

4) ☐ Other: _____.

DETAILED ACTION

Notice of Pre-AIA or AIA Status

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

Claims Status

Claims 1 and 9 filed 07/27/2026 have been amended.

Claims 1-6, 8-14 and 16 are pending and have been rejected.

Claims 7 and 15 have been canceled.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 07/27/2026 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Response to Arguments

Applicant's arguments filed 07/27/2026 have been fully considered but they are not persuasive. Applicant asserts that Roese nor Kim teach or suggest each and every element of amended independent claims 1 and 9. Furthermore, Roese does not teach or suggest at least wherein the first network zone and the second network zone each comprise separate virtual local area networks of the vehicle.

However, the Examiner respectfully disagrees as the reference of Roese et al. (U.S. Publication 2009/0187968) was used to show dynamic policy allocation for

network service provisioning in paragraphs 0012, 0023, 0026 & 0044. Kim et al. (U.S. Publication 2016/0255154) reference was used to show a security device for a network access to functional elements included in a vehicle and a method of designing the security device. Furthermore, Kim was used to disclose the limitation of "at least wherein the first network zone and the second network zone each comprise separate virtual local area networks of the vehicle".

As it is Applicant's right to claim as broadly as possible their invention, it is also the Examiner's right to interpret the claim language as broadly as possible. It is the Examiner's position that the detailed functionality that allows for Applicant's invention to overcome the prior art used in the rejection, fails to differentiate in detail how these features are unique. It is clear that Applicant must be able to submit claim language to distinguish over the prior arts used in the above rejection sections that discloses distinctive features of Applicant's claimed invention. It is suggested that Applicant compare the original specification and claim language with the cited prior art used in the rejection section above or the remark section below to draw an amended claim set to further the prosecution.

Failure for Applicant to narrow the definition/scope of the claims and supply arguments commensurate in scope with the claims implies the Applicant's intent to broaden claimed invention.

Based on the rationale explained above, the Examiner disagrees with the prior arts being silent to the claimed embodiment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

> A patent for a claimed invention may not be obtained, notwithstanding that the claimed invention is not identically disclosed as set forth in section 102, if the differences between the claimed invention and the prior art are such that the claimed invention as a whole would have been obvious before the effective filing date of the claimed invention to a person having ordinary skill in the art to which the claimed invention pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries for establishing a background for determining obviousness under 35 U.S.C. 103 are summarized as follows:

1. Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-16 are rejected under 35 U.S.C. 103 as being unpatentable over Roese et al. (U.S. Publication 2009/0187968), hereinafter 'Roese' in view of Kim et al. (U.S. Publication 2016/0255154), hereinafter 'Kim'.

As to claims 1 & 9, Roese discloses a method and an apparatus, comprising:

interpreting a policy comprising a network usage permission description (Roese,

see [0012] & [0023], dynamic policy system can enable a network administrator to establish comprehensive control of network services usage);

configuring a first network interface circuit in response to the network usage permission description (Roese, see [0026], the system is able to enforce established and generated policies, on an initial and continual basis, based on usage permission rules established by a network administrator. It can restrict usage of the network system and its services based on the attached function's characteristics, the particular connection point through which network infrastructure connection is established, and network system events related or unrelated to the attached function. See [0044], the policy system is configured to maintain and update the information associated with the attached functions and the network infrastructure of the network system in a centralized database, including the saved policies history); and

Roese is silent to regulating communications, using the first network interface circuit, between end points of a first network zone of a vehicle and end points of a second network zone of the vehicle, wherein the first network zone and the second network zone each comprise separate virtual local area networks of the vehicle.

However, Kim discloses regulating communications, using the first network interface circuit, between end points of a first network zone of a vehicle and end points of a second network zone of the vehicle (Kim, [0034], a vehicular security network device includes a first conduit, which is a sole network path connecting a first security zone to an external network. The first security zone can be construed as being a logical and/or physical zone including a plurality of functional elements of a vehicle. See [0040], a gate keeper is disposed on the conduit to control an access to the security zone by an

external source. See [0043], the gate keeper configured to maintain security of the subzone by the security element of a higher level than the gate keeper),

wherein the first network zone and the second network zone each comprise separate virtual local area networks of the vehicle (Kim, see [0100], the user uses application of the smartphone to communicate signal to the vehicle through a 3G/4G network or through the Internet, wherein the signal can access some of the functional elements through an internal network of the vehicle).

Therefore, it would have been obvious to a person of ordinary skill in the art before the effective filing date of the claimed invention to modify Roese in view of Kim in order to further modify the method provides dynamic network policy management from the teachings of Roese with the method of preventing a security attack/threat on a vehicle network from the teachings of Kim.

One of ordinary skill in the art would have been motivated because it would allow to analyze a risk to security of a vehicle and provide a security countermeasure against the analyzed risk. (Kim – 0006).

As to claims 2 & 10, Roese in view of Kim discloses everything disclosed in claims 1 & 10. Roese further discloses wherein the network usage permission description further comprises an external data access description (Roese, see [0045], network services usage is permitted an attached function via a connection point deemed not to be inherently secure (e.g., an edge Switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that

supplemental restrictions apply while in the insecure area); and the method further comprises: configuring a gatekeeper interface circuit in response to the external data access description (Roese, see [0026], enforce established and generated policies based on usage permission rules established by a network administrator. It can restrict usage of the network system and its services based on the attached function's characteristics, the particular connection point through which network infrastructure connection is established, and network system events related or unrelated to the attached function. All policy sets can be directed to all network entry devices. The policy sets can be apportioned among the network entry devices and attached functions forced to particular connection points based on established sets of policies. It is contemplated that multiple policies will be applied to the connection points); and regulating communications, using the gatekeeper interface circuit, with an external device in response to the external data access description (Roese, see [0045], network services usage is permitted an attached function via a connection point deemed not to be inherently secure (e.g., an edge switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area).

As to claim 3 & 11, Roese in view of Kim discloses everything disclosed in claims 2 & 10. Roese further discloses wherein the external data access description comprises permissions associated with the external device (Roese, see [0045], network services usage is permitted an attached function via a connection point deemed not to be

inherently secure (e.g., an edge switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area).

As to claims 4 & 12, Roese in view of Kim disclosed everything disclosed in claims 2 & 10. Kim discloses wherein: the external data access description comprises permissions associated with a flow of the vehicle (Kim, [0040-0041], a gate keeper is disposed on the conduit to control an access to the security zone by an external source. A security zone includes functional elements (vehicles) connected to the outside of the security zone through a conduit. A gate keeper is disposed on the conduit to control an access to the security zone by an external source.); and

Roese further discloses regulating communications comprises regulating communications based on a flow association of a communicating one of the end points of the first network zone or second network zone (Roese, see [0023], the dynamic policy function includes the sub-functions of monitoring the network for triggers, decision making of whether to modify an assigned set of policies and enforcement of the assigned set of policies. The dynamic policy function module of any particular device of the infrastructure can include any one or more of the three identified sub-functions. See [0045], network services usage is permitted an attached function via a connection point deemed not to be inherently secure (e.g., an edge switch port associated with an external internet connection), the policing system can prompt the attached function to

initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area).

As to claims 5 & 13, Roese in view of Kim disclosed everything disclosed in claims 2 & 10. Roese further discloses wherein: the external data access description comprises permissions associated with an application (Roese, see [0042], the set of policies evaluation and possible policy change or modification can occur per session, per port, per flow, per user, per attached function, per application sought, etc.), wherein regulating communications comprises: regulating communications based on an application association of a communicating device, the communicating device comprising one of: the external device, an end point of the first network zone, or an end point of the second network zone (Roese, see [0023], the dynamic policy function includes the sub-functions of monitoring the network for triggers, decision making of whether to modify an assigned set of policies and enforcement of the assigned set of policies. The dynamic policy function module of any particular device of the infrastructure can include any one or more of the three identified sub-functions. See [0045], network services usage is permitted an attached function via a connection point deemed not to be inherently secure (e.g., an edge switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area).

As to claims 6 & 14, Roese in view of Kim disclosed everything disclosed in claims 2 & 10. Kim further discloses wherein: the external data access description comprises permissions associated with a network zone of the vehicle, and regulating communications comprises: regulating communications based on at least one of a source zone or a destination zone of a regulated communication, and the external data access description (Kim, [0034], a vehicular security network device includes a first conduit, which is a sole network path connecting a first security zone to an external network. The first security zone can be construed as being a logical and/or physical zone including a plurality of functional elements of a vehicle. See [0040], a gate keeper is disposed on the conduit to control an access to the security zone by an external source. See [0043], the gate keeper configured to maintain security of the subzone by the security element of a higher level than the gate keeper).

As to claims 8 & 16, Roese in view of Kim disclosed everything disclosed in claims 1 & 9. Roese discloses wherein the network usage permission description further comprises: a network utilization description corresponding to at least one of the first network zone or the second network zone (Roese, see [0045], an attached function is permitted network services usage via a connection point deemed not to be inherently secure (e.g., an edge Switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area.); and wherein regulating communications comprises regulating communications based on the network utilization description, and an

associated communicating device associated with a regulated communication (Roese, see [0023], the dynamic policy function includes the sub-functions of monitoring the network for triggers, decision making of whether to modify an assigned set of policies and enforcement of the assigned set of policies. The dynamic policy function module of any particular device of the infrastructure can include any one or more of the three identified sub-functions. The policy sets can be apportioned among the network entry devices and attached functions forced to particular connection points based on established sets of policies. See [0045], network services usage is permitted an attached function via a connection point deemed not to be inherently secure (e.g., an edge switch port associated with an external internet connection), the policing system can prompt the attached function to initiate an improved connection, such as a VPN, or can notify the attached function that supplemental restrictions apply while in the insecure area)).

Kim further discloses and a communicating device description comprising at least one of an end point of one of the first network zone or the second network zone, a flow, a vehicle function, or an application (Kim, see [0040], a security zone include functional elements having a same required security level, and is connected to the outside of the security zone through a conduit. A gate keeper is disposed on the conduit to control an access to the security zone by an external source. See [0100], smartphone application of user (vehicle owner) can provide communication in order to access a functional element for controlling the vehicle);

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any nonprovisional extension fee (37 CFR 1.17(a)) pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TANIA M PENA-SANTANA whose telephone number is (571)270-0627. The examiner can normally be reached Monday - Friday 8am to 4pm EST.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at http://www.uspto.gov/interviewpractice.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas R Taylor can be reached at 5712723889. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
