LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

The present partial European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims.

Place of search	Date of completion of the search	Examiner
Munich	20 July 2022	Lindberg, Pia

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document

LACK OF UNITY OF INVENTION
SHEET B

Application Number
EP 22 16 0834

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. claims: 1, 2, 5-8(all partially)

A method for determining, diagnosing and/or prognosing an individual's risk of suffering from cardiovascular disease by detecting in a sample the expression level, amount and/or activity of TNF and GSTA1 alone or in combination with other markers selected from the markers as disclosed in claim 1, and a corresponding kit.

---

2. claims: 1, 2, 5-8(all partially)

A method for determining, diagnosing and/or prognosing an individual's risk of suffering from cardiovascular disease by detecting in a sample the expression level, amount and/or activity of NT-proBNP and RORA alone or in combination with other markers selected from the markers as disclosed in claim 1, and a corresponding kit.

---

3. claims: 3, 4(completely); 1, 2, 5-8(partially)

A method for determining, diagnosing and/or prognosing an individual's risk of suffering from cardiovascular disease by detecting in a sample the expression level, amount and/or activity of two or more biomarkers selected from the biomarkers as disclosed in claim 1, and and a corresponding kit.

---

4. claims: 9, 10(completely); 13-15(partially)

A method for determining, diagnosing and/or prognosing an individual's risk of suffering from cardiovascular disease by detecting in a sample a single nucleotide polymorphism (SNP) in the RORA gene, and medical use of the RORA.

---

5. claims: 11, 12(completely); 13-15(partially)

A method for determining, diagnosing and/or prognosing an individual's risk of suffering from cardiovascular disease by detecting in a sample a single nucleotide polymorphism (SNP) in the GHR gene, and medical use of the GHR.

The reasons for which the application is not considered to comply with the requirements of unity of invention are specified in the annexed provisional opinion accompanying the partial search results (EPO Form 1707).

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO. EP 22 16 0834

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
