SPRATT, BEAU D	

ART UNIT	PAPER NUMBER
2143	

NOTIFICATION DATE	DELIVERY MODE
05/22/2026	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patents@dekaresearch.com

Office Action Summary	Application No. 17/809,599	Applicant(s) BEAGLE et al.	
	Examiner BEAU SPRATT	Art Unit 2143	AIA (First Inventor to File) Status Yes

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTHS FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☑ Responsive to communication(s) filed on 27 April 2026.

☐ A declaration(s)/affidavit(s) under **37 CFR 1.130(b)** was/were filed on _____.

2a)☑ This action is **FINAL.** 2b) ☐ This action is non-final.

3)☐ An election was made by the applicant in response to a restriction requirement set forth during the interview on _____; the restriction requirement and election have been incorporated into this action.

4)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims*

5) ☑ Claim(s) 1-11,13-18,21-28 and 30-37 is/are pending in the application.

5a) Of the above claim(s) _____ is/are withdrawn from consideration.

6) ☐ Claim(s) _____ is/are allowed.

7) ☑ Claim(s) 1-11,13-18,21-28 and 30-37 is/are rejected.

8) ☐ Claim(s) _____ is/are objected to.

9) ☐ Claim(s) _____ are subject to restriction and/or election requirement

* If any claims have been determined allowable, you may be eligible to benefit from the **Patent Prosecution Highway** program at a participating intellectual property office for the corresponding application. For more information, please see http://www.uspto.gov/patents/init_events/pph/index.jsp or send an inquiry to **PPHfeedback@uspto.gov.**

Application Papers

10)☐ The specification is objected to by the Examiner.

11)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

Certified copies:

a)☐ All b)☐ Some** c)☐ None of the:

1.☐ Certified copies of the priority documents have been received.

2.☐ Certified copies of the priority documents have been received in Application No. _____.

3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

** See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☑ Notice of References Cited (PTO-892)

2) ☐ Information Disclosure Statement(s) (PTO/SB/08a and/or PTO/SB/08b) Paper No(s)/Mail Date _____.

3) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date _____.

4) ☐ Other: _____.

Notice of Pre-AIA or AIA Status

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

Response to Amendment

The Amendment filed 04/27/2026 has been entered. Claims 12, 19, 20 and 29 were canceled and claims 36-37 are new. Claims 1-11, 13-18 and 21-28 and 30-37 are now pending in the application.

Claim Rejections - 35 USC § 103

In the event the determination of the status of the application as subject to AIA 35 U.S.C. 102 and 103 (or as subject to pre-AIA 35 U.S.C. 102 and 103) is incorrect, any correction of the statutory basis for the rejection will not be considered a new ground of rejection if the prior art relied upon, and the rationale supporting the rejection, would be the same under either status.

The following is a quotation of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

> A patent for a claimed invention may not be obtained, notwithstanding that the claimed invention is not identically disclosed as set forth in section 102 of this title, if the differences between the claimed invention and the prior art are such that the claimed invention as a whole would have been obvious before the effective filing date of the claimed invention to a person having ordinary skill in the art to which the claimed invention pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, 11, 13, 15, 18, 28, 31, 34-35 and 37 are rejected under 35 U.S.C. 103 as being unpatentable over Chandra et al. (US 20020138582 A1 hereinafter Chandra) in view of Vitek et al. (US 20220147751 A1 hereinafter Vitek)

As to independent **claim 1**, Chandra teaches method of identifying desired information comprising:

determining a coarse filter based on a rule; [a rule has a coarse filter ¶583-584 "Each rule comprises an association with one event through a coarse-grain filter, a fine-grain filter that has one or more conditions, zero or more constants, one or more actions or handler"]

coarse filtering data with the coarse filter [¶545, ¶573 a coarse filter to filter based on event header Fig. 17B 1712 ¶584 "coarse-grain filters carry out filtering only on a header portion of an event message."]

determining a fine filter based on the rule; and [rule includes a fine filter ¶583-585 "Rule conditions may be created as coarse-grain filters or fine-grain filters"]

fine filtering the course-filtered sensor data with the fine filter; [The coarse filter first selects event messages based on basic criteria in the message header. Then, the fine filter further examines these pre-selected messages in detail, applying more specific conditions that must all be met for the associated action to trigger ¶602 "If the event message matches one of the coarse-grain filters, then in block 1742, one or more rules with fine-grain filters are retrieved. Rule constants are extracted from the rules in block 1746. In block 1748, the fine-grain filters are applied to the event message"]

Chandra does not specifically teach coarse filtering data received in real-time with the coarse filter, defining coarse-filtered sensor data; and wherein said coarse filtering is remote from said fine filtering.

However, Vitek teaches coarse filtering data received in real-time with the coarse filter, defining coarse-filtered sensor data; and [Real time detection (filtering) of camera images ¶55 " an image may be captured using a vehicle based camera and real-time automated pedestrian

avoidance may be performed based on the object detection techniques described herein. In other examples, a surveillance camera may capture images and real-time detection of unauthorized individuals, intruders, etc. may be performed based on the object detection techniques described herein", [coarse filtering first ¶66 "coarse-to-fine object detection. For instance, in a first stage (e.g., a coarse stage), heatmap network 600 outputs heatmaps (e.g., an object center heatmap and an object scale heatmap) as initial ROIs from an input image"]

wherein said coarse filtering is remote from said fine filtering. [Separate coarse Fig. 6 600 and fine stages Fig. 6 610 ¶66 "coarse stage), heatmap network 600 outputs heatmaps (e.g., an object center heatmap and an object scale heatmap) as initial ROIs from an input image. The input image and the heatmaps are then processed by post-processing component 605. A second stage (e.g., a fine stage) determines ROIs to be passed to object detection network 610 (e.g., such that the object detection network 610 that performs fine searching computations only performs such computations on refined ROIs from post-processing component 605"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the filtering system by Chandra by incorporating the coarse filtering data received in real-time with the coarse filter, defining coarse-filtered sensor data; and wherein said coarse filtering is remote from said fine filtering disclosed by Vitek because both techniques address the same field of detection analysis and by incorporating Vitek into Chandra saves computation costs with improved detection [Vitek ¶3].

As to dependent **claim 3**, the rejection of claim 1 is incorporated Chandra and Vitek further teach wherein the coarse filter comprises a feature of interest. [Vitek regions of interest with objects ¶16-17 “

As to dependent **claim 11**, the rejection of claim 1 is incorporated Chandra and Vitek further teach deleting all filtered sensor data. [Chanda deletes actions ¶590]

As to dependent **claim 13**, the rejection of claim 1 is incorporated Chandra and Vitek further teach compressing the desired information. [Vitek down-sampling and compression (encoding) ¶33]

As to dependent **claim 15**, the rejection of claim 1 is incorporated Chandra and Vitek further teach encoding the desired information. [Vitek down-sampling and compression (encoding) ¶33]

As to independent **claim 18**, the rejection of claim 1 is incorporated Chandra and Vitek further teach System for identifying desired information comprising a processor configured for the method of claim 1. [Chandra system and processor ¶191-192]

As to dependent **claim 28**, the rejection of claim 34 is incorporated Chandra and Vitek further teach wherein said receiving comprises an actor. [Chandra user defined rules ¶536]

As to independent **claim 31**, the rejection of claim 1 is incorporated Chandra and Vitek further teach computer-readable medium configured for storing instructions configured for the method of claim 1. [Chandra medium and computer program ¶815]

As to independent **claim 34**, the rejection of claim 1 is incorporated Chandra and Vitek further teach further comprising, prior to said determining, receiving the rule. [Chandra user defined rules ¶536]

As to independent **claim 35**, the rejection of claim 1 is incorporated Chandra and Vitek further teach further comprising tuning said coarse filtering and said fine filtering. [Chandra modify the rules that control filtering (tune) ¶581]

As to independent **claim 37**, the rejection of claim 1 is incorporated Chandra and Vitek further teach further comprising transmitting the coarse-filtered sensor data to a second filter module. [passes data (ROI) from first stage to second stage filter ¶66 Fig. 6 "ROIs to be passed to object detection network 610"]

Claims 2, 14, 24 and 36 are rejected under 35 U.S.C. 103 as being unpatentable over Chandra in view of Vitek as applied to the rejection of claim 1 above, and further in view of Darche et al. (US 10587483 B1 hereinafter Darche)

As to dependent **claim 2**, the combination of Chandra and Vitek teach all the limitations of claim 1 that is incorporated.

Chandra and Vitek do not specifically teach encrypting in place the filtered sensor data and defining encrypted sensor data.

However, Darche teaches encrypting in place the filtered sensor data and defining encrypted sensor data. [encrypting Col. 7 ln. 20-27 "The sensor computer 106 compresses the current file, performs any other operations such as encrypting the current file"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the encrypting in place the filtered sensor data and defining encrypted sensor data disclosed by Darche because all techniques address the same field of data analysis and by incorporating Darche into Chandra and Vitek provide more effective collection of data and filters deployed [Darche Col. 3 ln. 1-15]

As to dependent **claim 14**, the combination of Chandra and Vitek teach all the limitations of claim 1 that is incorporated.

Chandra and Vitek do not specifically teach encrypting the desired information.

However, Darche teaches encrypting the desired information. [encrypting Col. 7 ln. 20-27 "The sensor computer 106 compresses the current file, performs any other operations such as encrypting the current file"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the encrypting the desired information disclosed by Darche because all techniques address the same field of data analysis and by incorporating Darche into Chandra and Vitek provide more effective collection of data and filters deployed [Darche Col. 3 ln. 1-15]

As to dependent **claim 24**, the combination of Chandra, Vitek and Darche teach all the limitations of claim 2 that is incorporated. Chandra, Vitek and Darche further teach storing the encrypted sensor data. [Darche encrypting Col. 7 ln. 20-27 "The sensor computer 106 compresses the current file, performs any other operations such as encrypting the current file"]

As to dependent **claim 36**, the combination of Chandra and Vitek teach all the limitations of claim 1 that is incorporated.

Chandra and Vitek do not specifically teach further comprising transmitting the coarse filter to a filter module.

However, Darche teaches further comprising transmitting the coarse filter to a filter module. [sends filters to a sensor computer Col. 3 ln. 34-46 " provide packet capture filters to each of the sensor computer"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the further comprising transmitting the coarse filter to a filter module disclosed by Darche because all techniques address the same field of data analysis and by incorporating Darche into Chandra and Vitek provide more effective collection of data and filters deployed [Darche Col. 3 ln. 1-15]

Claim 4 is rejected under 35 U.S.C. 103 as being unpatentable over Chandra in view of Vitek, as applied to the rejection of claim 3 above, and further in view of Izenson et al. (US 20210191926 A1 hereinafter Izenson)

As to dependent **claim 4**, the combination of Chandra and Vitek teach all the limitations of claim 3 that is incorporated.

Chandra and Vitek do not specifically teach wherein the feature comprises a height of a subject.

However, Izenson teaches wherein the feature comprises a height of a subject. [Izenson height ¶23]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the feature comprises a height of a subject disclosed by Izenson because all techniques address the same field of data analysis and by incorporating Izenson into Chandra and Vitek provides user with more effective or consistent results preventing wastes of time [Izenson ¶2-3]

Claims 5-7, 9-10, 16-17, 21-23, 25-27, 30 and 32-33 are rejected under 35 U.S.C. 103 as being unpatentable over Chandra in view of Vitek as applied to the rejection of claim 3 above, and further in view of Boykin.

As to dependent **claim 5**, the rejection of claim 3 is incorporated Chandra and Vitek do not specifically teach wherein the feature comprises a model of a vehicle.

However, Boykin teaches wherein the feature comprises a model of a vehicle. [Boykin features for vehicle model ¶67 "vehicle identification parameters/characteristics (makes, models, colors, etc.)"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the feature comprises a model of a vehicle by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9]

As to dependent **claim 6**, the rejection of claim 3 is incorporated. Chandra and Vitek do not specifically teach wherein the feature comprises a color of a vehicle.

However, Boykin teaches wherein the feature comprises a color of a vehicle. [Boykin features for vehicle color ¶67 "vehicle identification parameters/characteristics (makes, models, colors, etc.)"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the feature comprises a color of a vehicle by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 7**, the rejection of claim 28 is incorporated. Chandra and Vitek do not specifically teach wherein the actor comprises a law enforcement agency.

However, Boykin teaches wherein the actor comprises a law enforcement agency. [Boykin law enforcement agencies, applications and offices ¶67-68]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the actor comprises a law enforcement agency by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 9**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein the desired information comprises an identity of a subject. [Boykin recognition of people ¶72 including facial recognition ¶93]

However, Boykin teaches wherein the desired information comprises an identity of a subject. [Boykin recognition of people ¶72 including facial recognition ¶93]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the desired information comprises an identity of a subject by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 10**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein the desired information comprises a license plate number.

However, Boykin teaches wherein the desired information comprises a license plate number. [Boykin ¶174 "analyzing the captured visual data, processor may detect the presence of

(suspect's) vehicle 3407 and various characteristics thereof (e.g., vehicle type, make, model, color, license plate number, etc.)"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the desired information comprises a license plate number by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 16**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein said coarse filtering is configured for determining human subjects.

However, Boykin teaches wherein said coarse filtering is configured for determining human subjects. [Boykin people Fig. 4 ¶72 " FIG. 4 depicts the recognition of multiple "people" shapes (shown in bounding boxes) 41 "]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein said coarse filtering is configured for determining human subjects by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 17**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein said coarse filtering is configured for determining license plate numbers.

However, Boykin teaches wherein said coarse filtering is configured for determining license plate numbers. [Boykin filters images for license plate ¶59/ ¶69]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein said coarse filtering is configured for determining license plate numbers by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 21**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach transmitting the desired information.

However, Boykin teaches transmitting the desired information. [Boykin remote storage and analysis transmits data ¶66, ¶70]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the transmitting the desired information by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 22**, the rejection of claim 28 is incorporated. Chandra and Vitek do not specifically teach confirming an authorization of the actor.

However, Boykin teaches confirming an authorization of the actor. [Boykin authorized users ¶94]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the confirming an authorization of the actor by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 23**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach securing said transmitting.

However, Boykin teaches securing said transmitting. [Boykin authorized users and RTSP has security ¶93]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the securing said transmitting by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 25**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach storing the desired information.

However, Boykin teaches storing the desired information. [Boykin remote storage ¶66, ¶70]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the storing the desired information by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 26**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein said coarse filtering occurs on an autonomous vehicle and said fine filtering occurs in a cloud.

However, Boykin teaches wherein said coarse filtering occurs on an autonomous vehicle and said fine filtering occurs in a cloud. [Boykin cloud ¶66, autonomous ¶90]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein said coarse filtering occurs on an autonomous vehicle and said fine filtering occurs in a cloud by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 27**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein the data comprise a location of the collection device.

However, Boykin teaches wherein the data comprise a location of the collection device. [Boykin GPS metadata (location) ¶59]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the data comprise a location of the collection device by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to dependent **claim 30**, the rejection of claim 1 is incorporated. Chandra and Vitek do not specifically teach wherein the collection device is fixed relative to an autonomous vehicle.

However, Boykin teaches wherein the collection device is fixed relative to an autonomous vehicle. [Boykin a collection device, such as a camera or microphone mounted on the docking station (which can be considered an autonomous vehicle when referring to police vehicles equipped with advanced technological capabilities), is fixed relative to the autonomous vehicle it is attached to ¶10-12]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the wherein the collection device is fixed relative to an autonomous vehicle by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to independent **claim 32**, the rejection of claim 1 is incorporated Chandra and Vitek do not specifically teach further comprising, prior to said fine filtering, receiving the coarse-filtered sensor data.

However, Boykin teaches further comprising, prior to said fine filtering, receiving the coarse-filtered sensor data. [Boykin remotely a collecting device such as Fig.1 vehicle computer 12 and server 48 device do filtering for tiered or second level filtering (multiple object recognition with different neural nets) ¶77-78 "the analytics for recognition and detection of the designated content is distributed among the vehicle 10 computer 12 and one or more remote computers (e.g. the server 15 in the police station 14)."..."use a separate neural network to instantly achieve multiple object recognition as described herein"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the further comprising, prior to said fine filtering, receiving the coarse-filtered sensor data by Boykin because all techniques address the same field of data analysis and by incorporating Boykin into Chandra and Vitek saves the time of operators of sensors by automating tasks in simple ways [Boykin ¶8-9].

As to independent **claim 33**, the rejection of claim 32 is incorporated Chandra, Vitek and Boykin further teach comprising securing said receiving. [Boykin authorized users and RTSP has security ¶93]

Claim 8 is rejected under 35 U.S.C. 103 as being unpatentable over Chandra in view of Vitek as applied to the rejection of claim 1 above, and further in view of Muetzel et al. (US 20140376778 A1 hereinafter Muetzel).

As to dependent **claim 8**, the combination of Chandra and Vitek teach all the limitations of claim 1 that is incorporated.

Chandra and Boykin do not specifically teach wherein the rule is based on a warrant

However, Muetzel teaches wherein the rule is based on a warrant [analysis server processes data by doing extractions (filtering) based on a warrant ¶35 "Based on the extracted license plate string, analysis server 150 may determine if the mini-van 320 is, for example, a stolen vehicle, subject to a search warrant, subject to emergency recall, registered to a person or company subject to a search warrant or police investigation, or more"]

Accordingly, it would have been obvious to a person of ordinary skill in the art before the effective filling date of the claimed invention to modify the sensor systems disclosed by Chandra and Vitek by incorporating the disclosed by Muetzel because all techniques address the same field of data analysis and by incorporating Muetzel into Chandra and Vitek helps users better identify objects and locations without intervention or automatically [Muetzel ¶33]

Response to Arguments

Applicant's arguments filed 04/27/2026. In the remark, applicant argues that:

(1) Chandra and Boykin fail to teach "determining a coarse filter based on a rule; coarse filtering data received in real-time with the coarse filter, defining coarse-filtered sensor data; determining a fine filter based on the rule; and fine filtering the course-

filtered sensor data with the fine filter; wherein said coarse filtering is remote from said fine filtering," As recited by amended claim 1.

As to point (1) Applicant's arguments with respect to claims have been considered but are moot in view of a new ground of rejection made under 35 U.S.C. 103 as being unpatentable over Chandra in view of Vitek as set forth above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is required under 37 C.F.R. § 1.111(c) to consider these references fully when responding to this action.

Varadarajan et al. (US 20190007690 A1) teaches edge device camera connected to an internet-based object detector (see ¶10)

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any nonprovisional extension fee (37 CFR 1.17(a)) pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the

advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BEAU SPRATT whose telephone number is (571)272-9919. The examiner can normally be reached M-F 8:30-5 EST.

Examiner interviews are available via telephone, in-person, and video conferencing using a USPTO supplied web-based collaboration tool. To schedule an interview, applicant is encouraged to use the USPTO Automated Interview Request (AIR) at http://www.uspto.gov/interviewpractice.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jennifer Welch can be reached at 5712127212. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of published or unpublished applications may be obtained from Patent Center. Unpublished application information in Patent Center is available to registered users. To file and manage patent submissions in Patent Center, visit: https://patentcenter.uspto.gov. Visit https://www.uspto.gov/patents/apply/patent-center for more information about Patent Center and https://www.uspto.gov/patents/docx for information about filing in DOCX format. For additional questions, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
