1 2026-07-30 02:28 UTC | ~16,851,878 results from

De-Dup: Simple Family Numbers (PAT only) | **Relevance Cut-off:** None | **Sort:** Relevance

Main Concept: Text
An estimation device inputs a physical quantity indicating plural member characteristics for an estimation target member into a learning model that employs as training data plural sets of a physical quantity indicating plural member characteristics of different types which change in time series according to deformation of a linearly- or nonlinearly-deforming member and a physical quantity indicating a performance state related to deformation of the member, and that has been trained by being input with physical quantities indicating the plural member characteristics so as to output physical quantities indicating the performance state related to deformation of the member, and estimates a physical quantity indicating a performance state related to deformation of the estimation target member.

De-Dup: Simple Family Numbers (PAT only) | **Relevance Cut-off:** None | **Sort:** Relevance

Main Concept: Text
trains a learning model using time-series member characteristics and corresponding performance-state labels, then applies that model to an estimation target member

Concept Modifiers: None

De-Dup: Simple Family Numbers (PAT only) | **Relevance Cut-off:** None | **Sort:** Relevance

Main Concept: Text
inputs a physical quantity indicating a plurality of member characteristics for an estimation target member into a learning model that: employs, as training data, a plurality of sets of a physical quantity indicating a plurality of member characteristics of different types which change in time series according to deformation of a linearly- or nonlinearly-deforming member and a plurality of sets of a physical quantity indicating a performance state related to deformation of the member, and has been trained by being input with physical quantities indicating the plurality of member characteristics so as to output physical quantities indicating the performance state related to deformation of the member; and estimates a physical quantity indicating a performance state related to deformation of the estimation target member.

Concept Modifiers: None

De-Dup: Simple Family Numbers (PAT only) | **Relevance Cut-off:** None | **Sort:** Relevance

Main Concept: Text
• the member has an electrical characteristic that changes according to the deformation; the physical quantity indicating the plurality of member characteristics includes a first physical quantity that indicates a pressure characteristic for deforming the member and a second physical quantity that indicates the electrical characteristic that changes according to the deformation of the member;the physical quantity indicating the performance state related to deformation of the member includes a third physical quantity that indicates a number of repetitions of deformation of the member; and the learning model is trained so as to output the third physical quantity with the first physical quantity and the second physical quantity as input
